

2023-2024

# STEM Field Trips

with The Center for Excellence in STEM Education

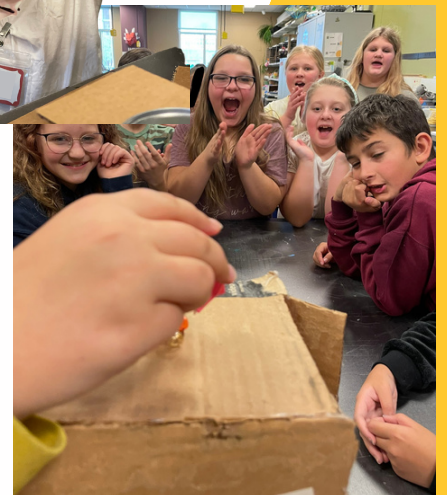

## Looking for an active, hands-on experience for your students? We've got you covered!

Visiting the makerspace for a STEM field trip is a great way for students in 3rd through 8th grade to engage with ideas, tools, and materials.

We use a design thinking approach to present open-ended scenarios in which students may identify several possible needs they might meet. These experiences are more about process than product, and communicating ideas rather than finding predetermined correct answers.

## TIPS to Consider

- Makerspace capacity is approximately 25 participants.
- General start times are 9am or 12pm.
- Completed Consent Form needed for each student who attends.
- Emphasis on process over product (prototypes stay at the makerspace).
- Cost for 2023-2024 is **\$2/student** (excluding transportation)
